

COMPUTER ESSENTIALS

CST8118

Course Description

Maintaining a computer, using operating system and productivity software, and expressing related environmental and sustainability concerns, is an important part of working with Information Technology. Students explain computer hardware, and use operating system software to maintain, utilize, and secure a computer. Students practice the use of spreadsheet software to solve problems and use formulas. Students discuss computer hardware and software with regards to financial and environmental sustainability. Theory is reinforced with application by means of practical laboratory assessments, including using virtualization software to install guest operating systems onto a host computer.
