Blackboard offers a **Visual Text Box Editor (VTBE)** so that you may add content to your course without having to know HTML. Blackboard handles the HTML coding for you.

Using the WYSIWYG (What You See Is What You Get), you may format text to create HTML, identify and correct spelling errors, add equations using Web EQ, and upload different types of files within a text box.

The **Editing Toolbar** includes tools to format the content that you enter into Blackboard.
