

Mapping Function in COMMS

The mapping function allows you to propose modifications to existing VLO (or PLO) and EES maps as a result of Program of Study changes made during the ACR cycle.

COMMS allows for the entry and capturing all of the mapping revisions performed by Program or Department Coordinators. Draft mapping changes are reviewed in COMMS by Curriculum Consultants in Academic Development before being activated. Once activated and COMMS rolls over for the next academic year, the revised mapping will appear in course outlines in preparation for final course outline submission.

Thank you!
