

H5P Accessible Activities

Full documentation can be found here: [Content Type Accessibility](#)

The table is a quick list of all the currently accessible activities.

Content Type	Description	Important Notes
Accordion	Vertically stacked expandable items.	
Arithmetic Quiz	Generate arithmetic quizzes consisting of multiple choice questions. Users keep track of score and time spent when solving the quiz.	
Audio Recorder	Audio Recorder allows you to record your voice and play it back immediately or download a .wav file for future use.	*Not compatible with Safari and IE
Chart	Allows for quick creation of bar and pie charts.	
Collage	Set up multiple photos in a custom layout. Choose from 11 layouts and configure image pan and zoom, image spacing (inner frame size), outer frame size and height of the collage.	
Column	Organize your content type into a column layout. Content types that address similar material or share a common theme can now be grouped together to create a coherent learning experience.	
Course Presentations	Course presentations consist of slides with multimedia, text, and many different types of interactions like interactive summaries, multiple choice questions and interactive videos. Learners can experience new interactive learning material and test their knowledge and memory in Course Presentations.	
Dialog Cards	Dialog cards can be used as a drill to help learners memorize words, expressions or sentences. On the front of the card, there's a hint for a word or expression. By turning the card the learner reveals a corresponding word or expression.	*Flip cards but with imagery and audio capabilities
Documentation	The documentation tool aims to make it easy to create assessment wizards for goal driven activities.	
Drag and Drop	Drag and drop questions enable the learner to associate two or more elements and to make logical connections in a visual way. Create Drag and drop questions using both text and images as draggable alternatives. H5P Drag and drop questions support multiple draggable to drop zone combinations; one-to-one, one-to-many, many-to-one and many-to-many.	*Can also be used in <ul style="list-style-type: none">• Course Presentation• Interactive Video• Question Set
Drag the Words	Drag the Words allows content designers to create textual expressions with missing pieces of text. The end user drags a	*Can also be used in

	missing piece of text to its correct place, to form a complete expression.	<ul style="list-style-type: none"> • Course Presentation • Interactive Video • Question Set
Fill in the Blanks`	Learners fill in the missing words in a text. The learner is shown a solution after filling in all the missing words, or after each word depending on settings.	
Find the Words	Activity that allows authors to create a list of words that will be drawn in a grid. The learners' task is to find and select the words in the grid AKA word search!	
Flash Cards	This content type allows authors to create a single flash card or a set of flashcards that have both questions and answers. Learners are required to fill in the text field and then check the correctness of their solution.	*Not fully accessible yet. Has a few known bugs that are being worked on
Guess the Answer	This content type allows authors to upload an image and add a suitable description. End users can guess the answer and press the bar below the image to reveal the correct answer.	*Similar to flash cards but without text field
Image Hotspots	Image hotspots makes it possible to create an image with interactive hotspots. When the user presses a hotspot, a popup containing a header and text or video is displayed.	
Image Pairing	Image pairing is a simple and effective activity that requires learners to match pairs of images. Since it is not required for both images in a pair to be the same, authors are also able to test the understanding of a relation between two different images.	
Image Sequencing	The Image Sequencing content type challenges the learner to order a randomized set of images according to a task description.	*Not fully accessible yet. Supposedly will be fixed next update
Image Slider	Image slider allowing users to create responsive image sliders with a full-screen mode in a user-friendly way. The next two images are always preloaded so switching between images will usually be snappy with no delay for loading the next image.	
Interactive Video	Videos may be enriched with interactivities like explanations, extra pictures, tables, Fill in the Blank and multiple choice questions. Quiz questions support adaptivity, meaning that you can jump to another part of the video based on the user's input. Interactive summaries can be added at the end of the video.	

Mark the Words	Mark the words allows content designers to create textual expressions with a defined set of correct words. The end user highlights words according to the task description and is given a score.	*Can also be used in <ul style="list-style-type: none"> • Course Presentation • Interactive Video • Question Set
Memory Game	To play the game, users search for image pairs, which will display a specified text message once a matching pair has been found.	
Multiple Choice	Question type allowing creatives to create challenges where the user is to identify one or more correct choices.	
Question Set	<p>Question Set is your typical quiz content type. It allows the learner to solve a sequence of various question types. You can combine many different question types like Multichoice, Drag and drop and Fill in the blanks in a Question set. As an author there are many settings you can use to make it behave just the way you want it to. You may for instance customize the Question set with background images and define a pass percentage for the learner.</p> <p>The Question Set also allows you to add videos that are played at the end. One video for success, another if the learner fails the test. This might motivate learners to try again if they fail so that they get to see the success video.</p>	
Single Choice Set	Single choice set allows content designers to create question sets with one correct answering alternative per question, in just a few seconds. The end user gets immediate feedback after submitting each answer.	
Summary	This content type allows creatives to create challenges where the user is to choose between statements and build the correct summary.	
True or False	Allowing creatives to create true/false questions. A more complex question can be created by adding an image or a video.
