Little is known about the origins of this humanoid mechanical being. Reports of its sighting date as far back as the 1700s. Primarily from east asia. Experts suggest that the origins are definitely extraterrestrial, though not enough is known about this machine to identify its motives. Whatever it is it has only been observed wandering the land, occasionally getting into trouble with the local population centers. Though it has not been observed being aggressive, only fighting in retaliation when provoked. Given the amount of time it has spent on this planet with little action, some suggest that it is merely trying to find a way off this world. Perhaps to return home, perhaps to continue the mission it was programmed to do.
